

On the 19th May, eleven Yr. 10 and 11 students from Cherrybrook Technology High School visited the Stephen Sanig Research Institute (SSRI) at the Australian Technology Park. SSRI's Executive Director Galina Kaseko hosted the visit which took the students into the amazing world of cross discipline bio-medical research. The students were treated to demonstrations of how to isolate single cells for use in monoclonal antibody research and how to start mapping and isolating DNA. During the visit, students were shown every aspect of an operating medical research institute including the variety of different roles that exist—from the multi-disciplinary team of scientists to Information Technology requirements, Commercialisation/legal roles, administration and accounting roles and finally the role of an executive.

**100%** of students said they learnt about new jobs that they previously didn't know about, and **100%** of students said they would like to attend another industry bites visit.

**64%** of students also said the visit had changed their opinions of the institute and working in the business.

"I enjoyed all the lab equipment and seeing it work"

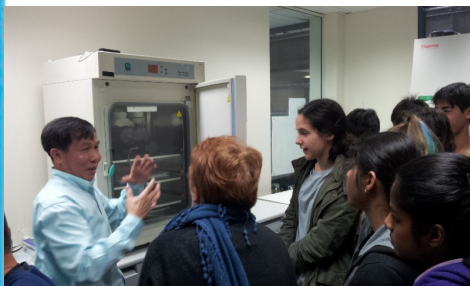

"I enjoyed hearing the workers' past experiences"

**STEPHEN  
SANIG**  
research institute

**CHERRYBROOK  
Technology High  
School**

"This visit gave me new information regarding multi-faded approach to science and the different elements necessary to live"
