

On the 10th of March, 8 senior students from Turrumurra High School visited the Stephen Sanig Research Institute (SSRI) at Australian Technology Park. SSRI's Executive Director Galina Kaseko hosted the visit which took the students into the amazing world of bio-medical research. The students were treated to demonstrations of how to isolate single cells and fuse cells using electromagnetic technology and how to start mapping DNA.

During the visit, students were shown every aspect of an operating medical research institute including different roles that exist—from the multi-disciplinary team of scientists to Information Technology requirements, Commercialisation/legal roles, administration and accounting roles and finally the role of an executive.

**88%** of students said they learnt about new jobs that they previously didn't know about, and **100%** of students said they would like to attend another Industry Bites visit.

**100%** of students also said the visit had changed their opinions of the company and working in the business.

"I enjoyed being able to actually see what scientists do and hear about all the different jobs within medical research"

"This has shown me how there is a wider variety of careers and opportunities than I originally thought"

**STEPHEN  
SANIG**  
research institute

"I didn't really know what this company did initially but I have always known I wanted to do science and now I realised that I could work for this company and I would like it"
